

Histogram

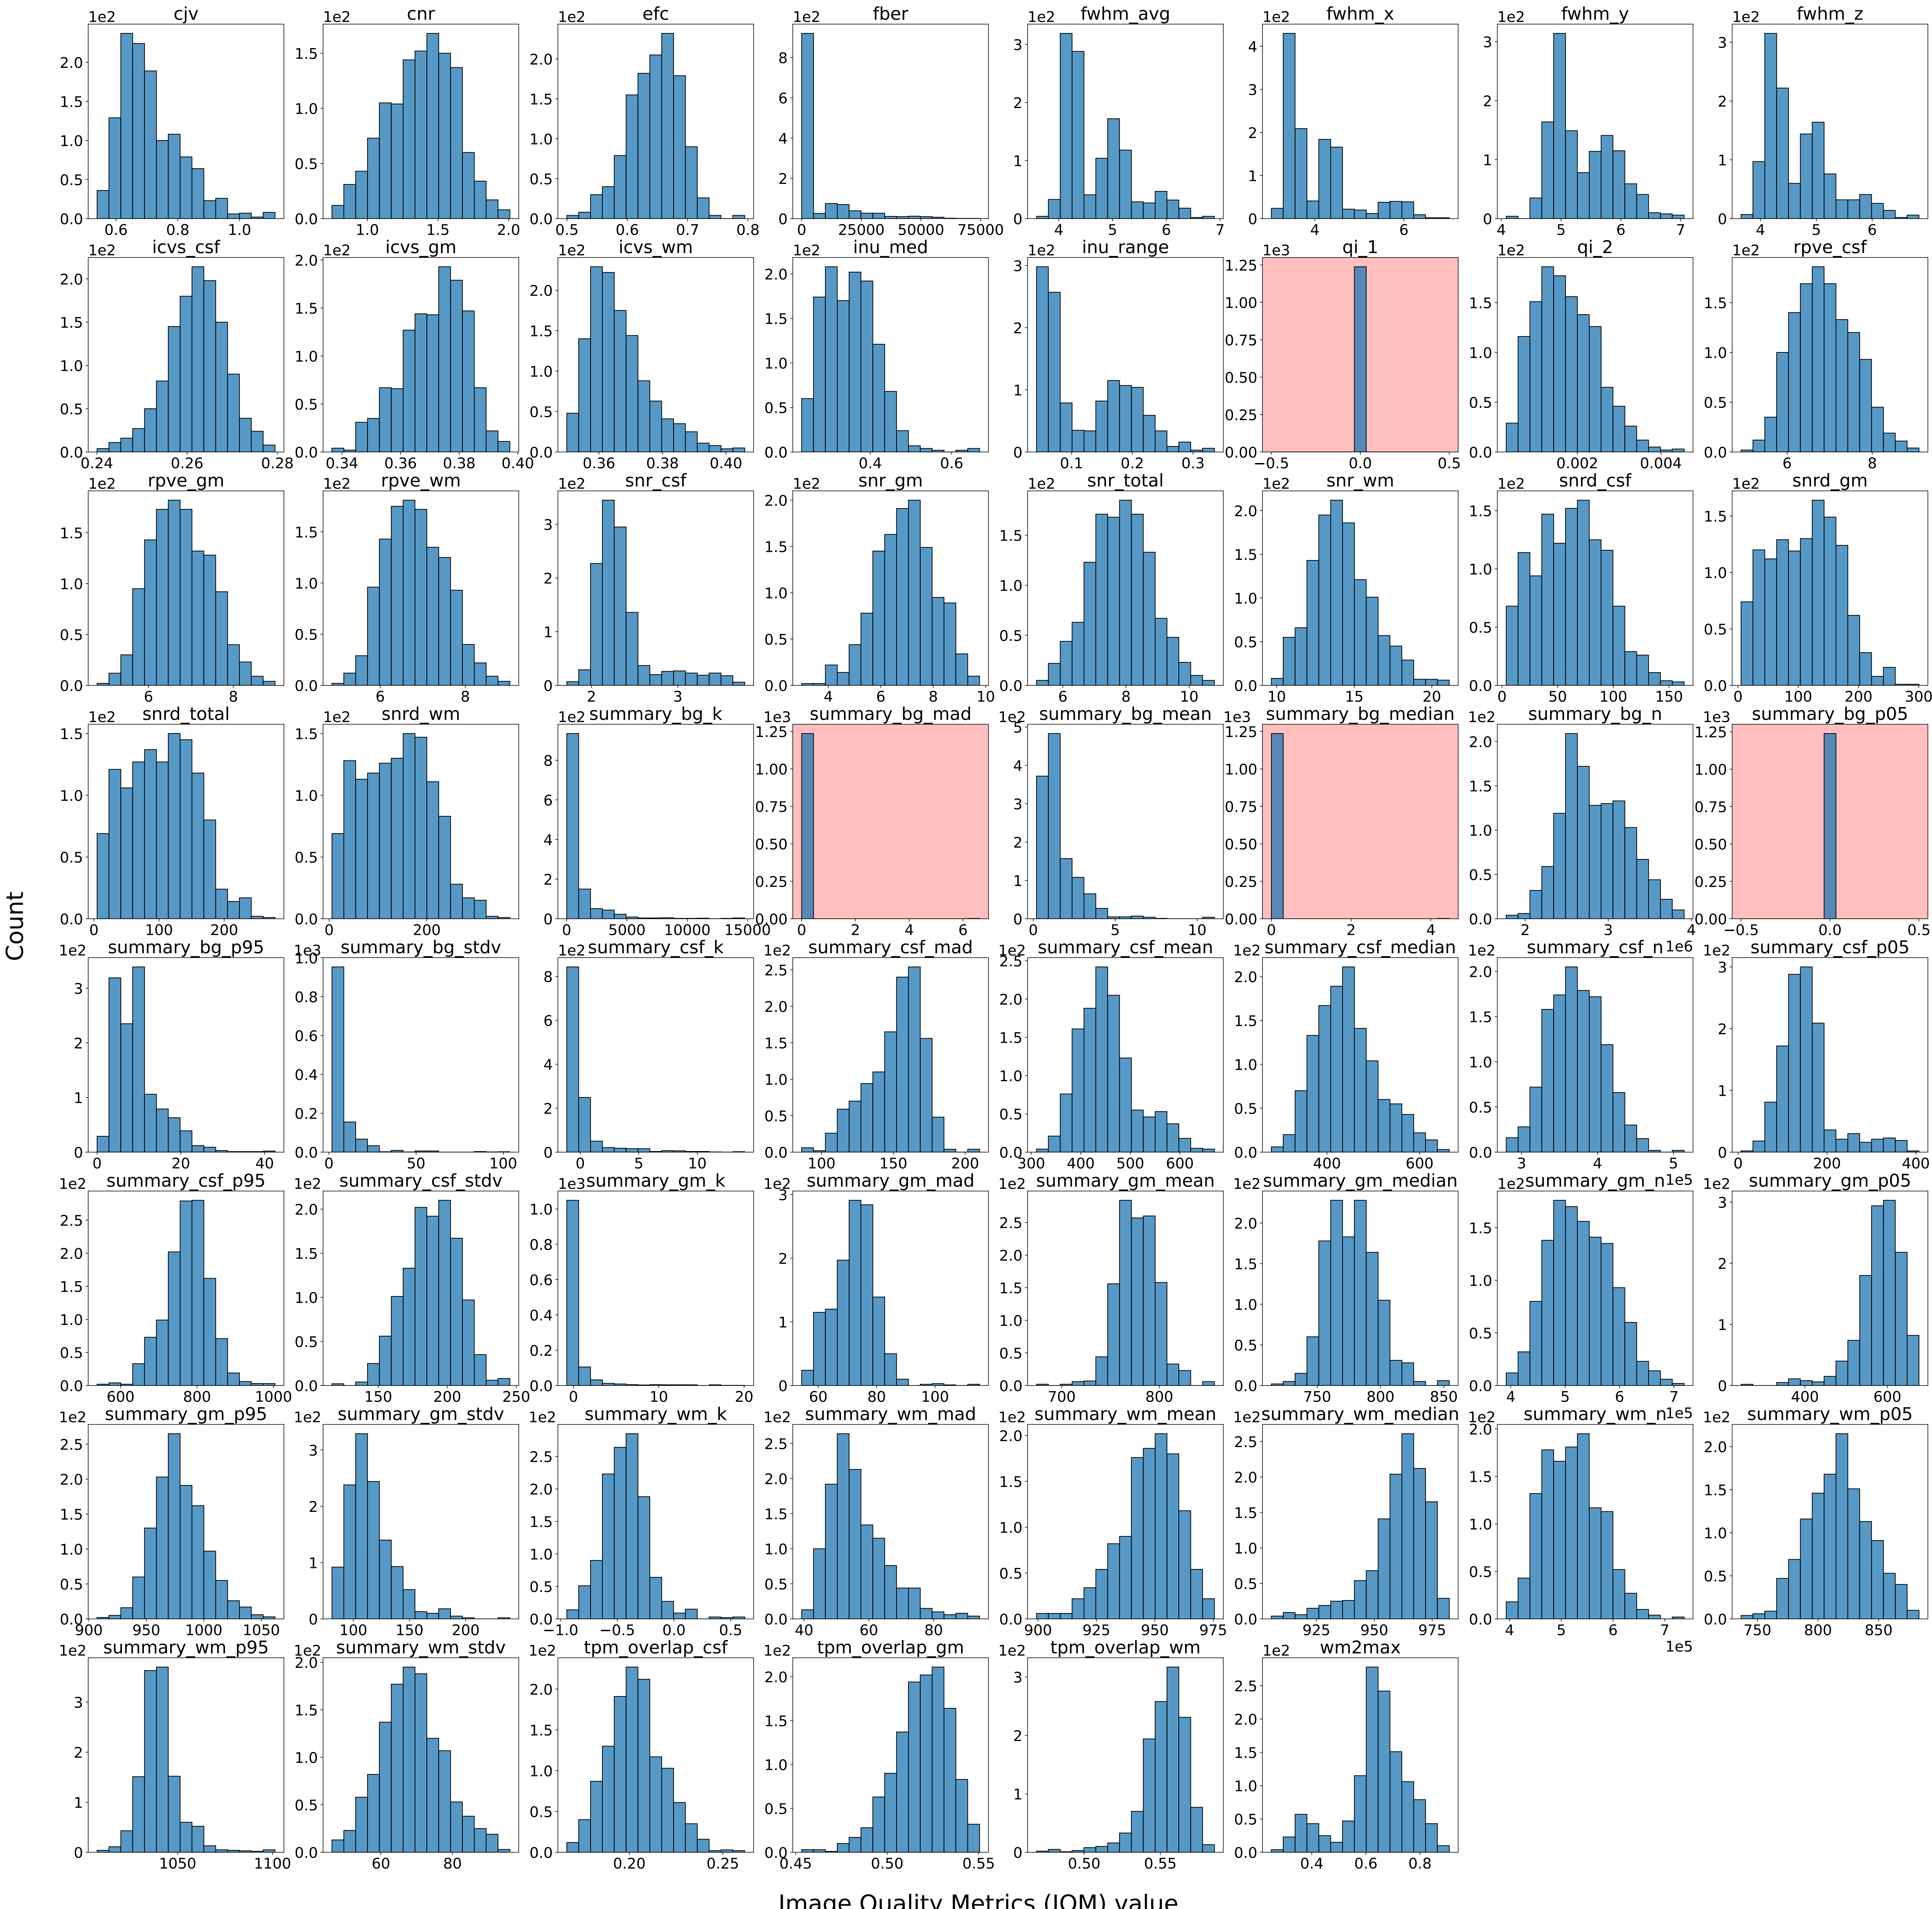

Fig S1. Distribution of the IQMs. The IQMs calculated from both defaced and non-defaced images were pooled together to draw the distributions. This plot shows that `qi_1`, `summary_bg_p05` are problematically always zero, while `summary_bg_mad`, `summary_bg_median` are always 0 except for two images which correspond to the defaced and non-defaced image of the same subject. These observation led us to exclude those IQMs from our analysis. Further investigation is needed to understand why these IQMs seem to be erroneously computed.
